

MEASURING PROGRESS + IMPACT OF INITIATIVES

ODSS
Online Documentation
and Support System

A COMMON MEASUREMENT SYSTEM

Capturing data on progress helps support participatory evaluation, accountability, and continuous quality improvement.

The Online Documentation and Support System (ODSS) is a web-based suite for recording, analyzing, and reporting on progress. It provides real-time data to better understand and improve the initiative's efforts to achieve outcomes. It aids in documenting accomplishments and sharing success stories with funders and other stakeholders.

This tool helps groups tell their collective impact story.

THE ODSS ENABLES GROUPS TO:

- ▶ Document activities and associated community-level outcomes
- ▶ Show changes in communities and systems resulting collaborative action
- ▶ Discover factors associated with program implementation
- ▶ Visually display data, with integrated supports for sensemaking and improvement
- ▶ Prepare real-time graphs and reports for key stakeholders and funders
